WESTON
## BRAIN INSTITUTE

SPECIAL INVITATION

Work in Adjacent Fields

Expression of particular interest in applications that bring in expertise, technologies, or approaches to advance the development of therapeutics and tools for neurodegenerative diseases of aging.

HIGH PRIORITY AREAS INCLUDE:

Artificial Intelligence, Big data, Machine Learning, Data science, Computer science, Medicinal chemistry, Biostatistics and Engineering

How to apply:
Applicants can apply to any of our existing programs. Applications must be within the scope of the relevant program.

Funding available:
Up to $10 million/year.
In addition, resources and support will be available as needed for researchers to work across these disciplines to advance treatments for our diseases.
